

- One chair for all types of frontal and side impact dummy
- Robust design with aluminium profile technology
- Proper dummy storage and better handling due to easy-lift ratchet system
- Easy access to the upper torso due to the single post construction
- Practical racks for tools and components (optional tool holder)
- Large working plate
- Easier service and maintenance
- Safety against overturning (low CoG)
- Fixing brake at each caster

## ATD Service Chair

The moveable ATD Service Chair is conceived for an advanced storage and maintenance of crash test dummies. The strong design and the new ratchet lifting system support all dummy types for frontal and side impact and provide the proper storage without effort. The risk of overturning is minimized by the low center of gravity and the large working plate. The assembly and disassembly procedures are simplified due to the single post construction of the cantilever. This guarantees an easy access to the upper torso of the ATD (Anthropomorphic Test Device). For demounted instrumentations and components or tools additional space is afforded by two shelves.

### Technical Specifications

Total height	1750 mm
Sitting height	650 mm
Width	500 mm
Depth	650 mm
Mass	47,4 kg
Scope of dummies	Standard frontal and side impact ATDs
Maximum vertical load	100 kg
